To detect the expression of estrogen receptor(ER) α ,human epidermal growth factor receptor 2(HER2) and Ki-67 in endometrial cancer and to evaluate their relation with clinicopathological features.

Immunohistochemistry was used to detect the expression of ER α , HER2 and Ki-67 in tumor tissue from 125 patients with endometrial cancer. ER α , HER2 and Ki-67 positive rates were 42.8%, 41.6% and 53.6% in the endometrial cancer respectively. The positive rate of ER α and HER2 increased with advancing FIGO grade and myometrial invasion, while the negative rate of Ki-67 increased with advancing FIGO grade and myometrial invasion. The median survival time of the patients with high expression of ER α was markedly longer than that of the patients with low expression of ER α . The median survival time of the patients with high expression of HER2 was significantly shorter than that of the patients with low expression of HER2. ER α , HER2 and Ki-67 can be used as the potential prognostic markers for endometrial cancer. The present invention relates to compositions and method for preventing and treating eye inflammation, and more particularly to compositions comprising a-chain endonucleases from fungal origins and their use to prevent and treat inflammation of the eye.
